EXPERIENCE

RespondIt AI — San Francisco, CA

Solutions Architect — May 2025 – October 2026

- Built the company's client reporting infrastructure from zero into a **report console (FastAPI + React)** with a versioned prompt store, compliance gates, deterministic citation checking, and docx output; grew the test suite from **0 to 829 passing tests** while shipping reports for **6+ housing authority clients** handling **7,000 to 13,000 calls a month** each.
- Shipped a production **AI maintenance-line voice agent integrated with Yardi (SOAP)**, including work-order sync, caller verification against tenant records, emergency escalation logic, and a property crosswalk spanning **63 properties** and three management companies.
- Built **RAG document pipelines** for **5+ clients**, converting public housing authority websites and policy documents into structured, client-editable knowledge bases that ground live voice and SMS agents.
- **Managed a team of 4 engineers in Poland**, setting technical direction, scoping and assigning work, and reviewing delivery across time zones while remaining hands-on in the codebase.
- Diagnosed a production bug where **silent Yardi write failures returned 200 to the LLM**, creating phantom work orders; shipped a prompt-level fix, validated it through call-simulator testing, and delivered the engineering fix plan.
- Led a **forensic analysis** for the company's largest development partner, attributing a **20+ point drop in AI resolution rate** to specific prompt and model changes across three configuration eras; presented findings to the client CEO and leadership with remediation split by owner.
- Defined a **defensible AI resolution metric** after auditing the CRM codebase and identifying three data-recording seams.

AT&T — Austin, TX

Senior Software Engineer — March 2023 – May 2024

- Built a **React and GraphQL** interface for a generative AI–powered vulnerability patching tool, reducing discovery-to-remediation time by **80%** through real-time AI recommendations and automated security workflows.
- Led the upgrade of a data privacy tool built on a **Django** backend and **TypeScript React** frontend, increasing transaction processing speed by **20%** and reducing memory usage by **18%**.
- Enhanced the cloud-based **Node.js** backend of an internal authentication integration tool, cutting developer onboarding time by **30%** and automating manual processes to save 15 hours per project.

Professional Software Engineer — August 2022 – March 2023

- Built **FieldConnect**, a React and Twilio proof of concept for real-time issue resolution, using **webhook-driven integrations** to cut response times by **50%**, with metrics dashboards and alert automation for admins and field technicians.
- Integrated legacy systems, SQL databases, and Snowflake by developing **REST and SOAP APIs and webhook integrations in MuleSoft** with custom data models, supporting the Fiber team's acquisition of **1,000+ subscribers**.

Technology Development Program Engineer — January 2021 – August 2022

- Architected a **Terraform-powered Azure DevOps pipeline** automating deployment and configuration of 5G cloud network functions, saving **100+ hours** for third-party vendors while standardizing resource provisioning.
- Deployed **Power BI** dashboards integrating Azure cost data, contributing to **$50M** in annual infrastructure savings, and developed predictive analytics for resource allocation across cloud, HR, and sales teams.
- **Mentored engineers** within AT&T's Technology Development Program, guiding peers on code quality, cloud architecture, and delivery practices.

Gathr

Austin, TX

Software Engineer & QA Analyst, Part-Time

September 2021 – March 2022

- Improved system efficiency by porting a cloud-based chat service from **Python to Go**, reducing response time by **25%** on Google Cloud Functions.

SELECTED PROJECTS

Aura (systems.earth) ↗ Full-stack AI environmental data platform

- Built a **full-stack TypeScript platform (React/Vite, Node.js/Express, PostgreSQL/Drizzle)** that ingests **20+ federal, scientific and regional data sources** (EPA AQS, CDC PLACES and SVI, Census ACS, USGS, EIA, NOAA, World Bank) into source-cited city briefs and planetary indicators, generating briefs on demand for **~30,000 U.S. places**.
- Designed a multi-stage **fetch → audit → synthesize → verify → publish** AI pipeline on **Anthropic Claude (Sonnet, Haiku)**: geography and magnitude audits plus claim validation keep unverified output from replacing a published brief, and city Q&A answers only from verified data with source and date citations, streamed over **SSE**.
- Runs on an **always-on cloud VM** with separate dev and prod databases; a **database-backed job worker** with shared locking handles scheduled refreshes, queued generation and retries, backed by stale-while-revalidate serving, tiered freshness windows (**12 hours to 60 days**), tracked AI spend, and a rate-limited, session-authenticated admin API.

Layers ↗ San Francisco microclimate PWA

- Neighborhood-level apparent-temperature app answering whether a given block will feel cold or hot, sun or shade, using Steadman apparent temperature with separate shade and sun readings across 15 SF neighborhoods.
- Express and React (Vite) on Open-Meteo and the US Census Geocoder with tiered caching, solar-anchored sky gradients, and link previews that render live temperatures.

SKILLS

AI & LLM Systems	RAG ingestion pipelines, prompt versioning & evaluation, citation verification, LLM voice/SMS agents, AI summarization, Anthropic Claude API
Backend & Integrations	Python (FastAPI, Django), Node.js, Express, REST, SOAP, GraphQL, webhooks, SSE, MuleSoft, PostgreSQL (Drizzle ORM), MongoDB, Snowflake, SQL, Twilio, Yardi API
Frontend & Tools	React, TypeScript, Power BI, Jira
Cloud & DevOps	Azure, GCP, AWS CloudWatch, Kubernetes, Terraform, CI/CD, Git
Leadership	Managing distributed engineering teams, mentoring, technical scoping, executive and customer communication, metric definition
Languages	Python, TypeScript, JavaScript, Go, Ruby, Dart, SQL, HTML/CSS · Spanish (fluent), French (advanced)

EDUCATION

The University of Texas at Austin

Austin, TX

B.A. Sustainability Studies · Elements of Computing Certificate

May 2020
