EXPERIENCE

RespondIt AI

San Francisco, CA

Solutions Architect

May 2025 – Present

- Shipped a production **AI maintenance-line voice agent integrated with Yardi (SOAP)**, including work-order sync, caller verification against tenant records, emergency escalation logic, and a property crosswalk spanning **47 properties** and three management companies.
- Built **RAG document pipelines for 5+ clients**, converting public housing authority websites and policy documents into structured, client-editable knowledge bases that ground live voice and SMS agents.
- Built the company's client reporting infrastructure from zero into a **report console (FastAPI + React)** with a versioned prompt store, compliance gates, deterministic citation checking, and docx output; grew the test suite from **0 to 463 passing tests** while shipping reports for **6+ housing authority clients** at **8,000+ calls per client per month**.
- Led a **forensic analysis** for the company's largest development partner, attributing a **20+ point drop in AI resolution rate** to specific prompt and model changes across three configuration eras; presented findings to the client CEO and leadership with remediation split by owner.
- Diagnosed a production bug where **silent Yardi write failures returned 200 to the LLM**, creating phantom work orders; shipped the fix and validated it through call-simulator testing. Defined a **defensible AI resolution metric** after auditing the CRM codebase and identifying three data-recording seams.

AT&T

Austin, TX

Senior Software Engineer

March 2023 – May 2024

- Built a **React and GraphQL** interface for a generative AI-powered vulnerability patching tool, reducing discovery-to-remediation time by **80%** through real-time AI recommendations and automated security workflows.
- Enhanced the cloud-based **Node.js** backend of an internal authentication integration tool, cutting developer onboarding time by **30%** and automating manual processes to save 15 hours per project.
- Led the upgrade of a data privacy tool built on a **Django** backend and **TypeScript React** frontend, increasing transaction processing speed by **20%** and reducing memory usage by **18%**.

Professional Software Engineer

August 2022 – March 2023

- Integrated legacy systems, SQL databases, and Snowflake by developing **REST and SOAP APIs in MuleSoft** with custom data models, supporting the Fiber team's acquisition of **1,000+ subscribers**.
- Built **FieldConnect**, a React and Twilio proof of concept for real-time issue resolution that reduced response times by **50%**, with metrics dashboards and alert automation for admins and field technicians.

Technology Development Program Engineer

January 2021 – August 2022

- Deployed **Power BI** dashboards integrating Azure cost data, contributing to **\$50M** in annual infrastructure savings, and developed predictive analytics for resource allocation across cloud, HR, and sales teams.
- Architected a **Terraform-powered Azure DevOps pipeline** automating deployment and configuration of 5G cloud network functions, saving **100+ hours** for third-party vendors while standardizing resource provisioning.

Gathr

Austin, TX

Software Engineer & QA Analyst, Part-Time

September 2021 – March 2022

- Improved system efficiency by porting a cloud-based chat service from **Python to Go**, reducing response time by **25%** on Google Cloud Functions.
- Implemented regression testing for iOS and Android **Flutter** builds and strengthened Firebase–GCP integration, improving app stability and cloud-to-mobile data flow.

ListingSpark

Austin, TX

Associate Software Engineer

June 2018 – August 2018

- Developed an offer management platform in **Ruby on Rails and Node.js** that streamlined bid tracking for property owners and integrated MLS data, improving operational efficiency by **20%**.
- Improved research and development data tracking by **80%** with a Python script that analyzed thousands of entries and exposed logging errors in **MongoDB**.

SELECTED PROJECTS

systems.earth ↗ Civic environmental data platform

- Generates plain-language environmental and health briefs for **~30,000 U.S. places** from federal datasets (CDC PLACES, EPA AQS, CDC SVI, NCES, EIA, Census), with every claim traceable to a named source and deterministic badge-locked language preventing LLM prose from contradicting underlying data.
- Architecture includes a stale-while-revalidate generation model with atomic brief swaps, a research→propose→approve curation workbench, a pipeline health dashboard, and city-scoped retrieval Q&A.

Layers ↗ San Francisco microclimate PWA

- Neighborhood-level apparent-temperature app answering whether a given block will feel cold or hot, sun or shade, using Steadman apparent temperature with separate shade and sun readings across 15 SF neighborhoods.
- Express and React (Vite) on Open-Meteo and the US Census Geocoder with tiered caching, solar-anchored sky gradients, and link previews that render live temperatures.

SKILLS

AI & LLM Systems	RAG pipelines, prompt versioning & evaluation, citation verification, LLM voice/SMS agents
Languages	Python, TypeScript, JavaScript, Go, Ruby, Dart, SQL, HTML/CSS
Cloud & Frameworks	Azure, GCP, Kubernetes, Terraform, CI/CD, React, Node.js, Django, Express, FastAPI, PostgreSQL, MongoDB, Power BI, Twilio, Yardi API (SOAP), Git, Jira
Spoken Languages	Spanish (fluent), French (advanced)

EDUCATION

The University of Texas at Austin

Austin, TX

B.A. Sustainability Studies · Elements of Computing Certificate

May 2020

Coursework: Software Engineering, Software Design, Data Analytics, Web Programming, Mobile Computing.
